Art Unit:

***Claim Rejection under 35 U.S.C. 103(a)***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 18-23,26-37,39-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sumitomo (JP08175910; 7/9/96). Sumitomo teaches a poison bait composition in the form of a granule comprising 0.01-90 % fipronil, nitrocellulose (moisture-retaining agent), maize (cereal), and honey (sugar). See abstract. Sumitomo does not teach the composition comprising instant amounts of ingredients. Sumitomo does not teach the instant particle size of the granules. It would have been obvious to one having ordinary skill in the art to determine the optimum amounts of ingredients and particle sizes of granules. One would have been motivated to do this in order to make the most effective composition for controlling baits. It is very possible that the optimum amounts of ingredients and granule particle sizes could have fallen within the instant ranges.

***Claim Objection / Election***

Claims 42-50 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any

Art Unit:

intervening claims. The prior art does not teach or suggest the instant method comprising applying the instant composition over and into the soil. The elected composition / method comprising cellulose, maize, fipronil, and lactose is allowable.
